New fuel filter GS1200

Starting from June 2018 the fuel filter **GS10535**, for NISSAN applications, has been replaced with the new one **GS1200**. The new GS1200 is produced using a synthetic filter media, with high water/fuel separation technology, and enriched with a particular phenolic fibers that help to stop the formation of microorganisms, such as bacteria and algae, which instead generated within the filter could cause it premature clogging with serious repercussions on the engine.
